

# ECOLOGICAL SCIENCES & ENGINEERING

INTERDISCIPLINARY GRADUATE PROGRAM

Ecological Sciences and Engineering (ESE) is an interdisciplinary graduate program at Purdue University. The ESE curriculum is designed to create a foundation necessary for sustainable management. Understanding the processes that link human activity and ecological systems is essential to improving natural resource management and developing solutions.

As an ESE graduate student, you will be exposed to large-scale ecological issues and the scientific principles that help design solutions. The ESE program aims to train students at the MS and PhD level.
