Subject: ***Recommendation of Dimitri Peroulis for Reilly Professorship***

The Engineering Named Professorships Committee unanimously recommends Professor Dimitrios Peroulis for appointment as the Reilly Professor of Electrical and Computer Engineering. This recommendation is based on his recognition as a global leader in the field of reliable microelectromechanical systems for radio frequency applications and sensors. Brief comments from some of the committee members below are indicative of the level of enthusiasm for this candidate:

- This is an outstanding candidate from the perspective of research, teaching, and service, as summarized in the excellent nominating statement. He has a leadership quality that is unique - and uniquely suited - for the many roles that he fills at the university. I would strongly support the nomination of Professor Peroulis, and hope that his name will go forward.
- As the reference letter from Swaminathan says, this case is a "no-brainer." Peroulis has excelled in all academic duties. In particular, his professional service includes leadership roles in IEEE activities.
- Professor Peroulis has stellar performance in research, teaching, service, and leadership
