

BRUSSELS SPROUTS

Selection Info

Look for bright green, firm sprouts, and avoid sprouts with loose leaves. Brussels sprouts flavor should improve in cool weather and after a frost.

Preparation

Rinse under cold running water to

remove any dust or dirt. Use a small knife to remove the sprout tip, and then remove any leaves that have bad spots. **Raw:** Slice thinly and toss with other shredded vegetables like cabbage, carrots, or beets. Add your favorite salad dressing.

Roast: Toss sprouts in olive oil, lay flat on a baking sheet, and roast in a 400°F oven for 40 minutes.

Stove Top: Boil a pot of water with a pinch of salt. Wash sprouts under cold running water and remove any leaves or yellow spots you may see. Place sprouts in a pot and cook for about 10-15 minutes. Sprouts are done when a knife will easily cut through them. Season with butter, salt, and pepper to taste.

Or, steam in a pot with a steamer basket and approximately 2 inches of water until tender.

Sauté: Wash sprouts under cold

running water and remove any yellow spots and then cut them in half. Put 1-2 tablespoons of olive oil in a skillet. Place the sprouts flat side down in the skillet. Add salt and pepper to taste.

Cook on each side for about 5 minutes or until golden brown.

Storage

Short-Term Storage: Fresh Brussels sprouts are sold in two forms: attached to the stem and off of the stem.

Attached to the Stem: Remove Brussels sprouts from the stem and discard the stem. Store with a damp towel in a plastic bag in the refrigerator.

Off the Stem: Store with damp towel in a plastic bag in the refrigerator. Brussels sprouts can be refrigerated in a ventilated plastic bag for about a week. Do not wash or peel sprouts until ready to use.

Long-Term Storage: Root Cellar: Store in a cool 32-40°F cellar with high humidity. Do not store Brussels sprouts in the refrigerator long-term due to the low humidity. However, you can freeze them.
